

Name: Fahad Ali

Reg ID: L1F22BSCS0421

Course: CC

Section: G5

Project Phase 2 Document: Jugr Language.

1. Context-Free Grammar (CFG) for Jugr Language

1. Program Structure

$\langle \text{Program} \rangle \rightarrow \langle \text{ImportLibraries} \rangle \langle \text{FunctionList} \rangle \langle \text{mainFunc} \rangle$

$\langle \text{ImportLibraries} \rangle \rightarrow \text{shamil_karo string_literal} \langle \text{ImportLibraries} \rangle \mid \epsilon$

2. Data Types

$\langle \text{DType} \rangle \rightarrow \text{pura_number} \mid \text{thora_number} \mid \text{jumla} \mid \text{harf}$

3. Expressions

$\langle \text{Expression} \rangle \rightarrow \langle \text{DType} \rangle \text{ Identifier} ;$

$\mid \langle \text{DType} \rangle \text{ Identifier} = \langle \text{E} \rangle ;$

$\mid \text{ Identifier} = \langle \text{E} \rangle ;$

$\mid \langle \text{E} \rangle ;$

$\langle \text{E} \rangle \rightarrow \langle \text{E} \rangle + \langle \text{F} \rangle \mid \langle \text{E} \rangle - \langle \text{F} \rangle \mid \langle \text{F} \rangle$

$\langle \text{F} \rangle \rightarrow \langle \text{F} \rangle * \langle \text{G} \rangle \mid \langle \text{F} \rangle / \langle \text{G} \rangle \mid \langle \text{F} \rangle \% \langle \text{G} \rangle \mid \langle \text{G} \rangle$

$\langle \text{G} \rangle \rightarrow \text{ Identifier} \mid \text{ Number} \mid \langle \text{U} \rangle \mid (\langle \text{E} \rangle)$

$\langle \text{U} \rangle \rightarrow \text{ Identifier} ++ \mid ++ \text{ Identifier} \mid \text{ Identifier} -- \mid -- \text{ Identifier}$

4. Arrays

$\langle \text{ArrayStatement} \rangle \rightarrow \langle \text{DType} \rangle \text{ Identifier} \langle \text{Array} \rangle = \langle \text{list} \rangle ;$

| <DType> Identifier <Array> ;
 | Identifier <Array> = <E> ;
 <Array> -> [<E>] <Array> | [<E>]
 <list> -> { <Element> }
 <Element> -> <Value> , <Element> | <Value>
 <Value> -> number | <list>

5. Conditional Statements

<condStatement> -> maan_lo_ye (<condition>) { <code_block> } <condElse>
 <condElse> -> warna_maan_lo_ye (<condition>) { <code_block> } <condElse>
 | bas_maan_lo_bhai { <code_block> }
 | ϵ
 <condition> -> <E> <RelOp> <E> | <E> <LogOp> <E> | <E>
 <RelOp> -> ke_barabar_ha | ke_barabar_nahi_ha | se_bada_ha | se_chota_ha
 | se_bada_ya_barabar_ha | se_chota_ya_barabar_ha
 <LogOp> -> aur_bhi | ya_phir

6. Loops

<LoopType> -> <ForLoop> | <WhileLoop> | <DoWhile>
 <ForLoop> -> ghuma_de (<ForInit> <condition> ; <UpdateLoop>) { <code_block> }
 <WhileLoop> -> ghumata_reh (<condition>) { <code_block> }
 <DoWhile> -> pehle_kar { <code_block> } ghumata_reh (<condition>);
 <UpdateLoop> -> Identifier = <E> | <U>

7. Input and Output

<Input> -> sunle (string_literal , <Id_List>);

<Id_List> -> Identifier , <Id_List> | Identifier

<Output> -> likhle (<Output_Content>) ;

<Output_Content> -> <Output_Content> + <Output_Value> | <Output_Value>

<Output_Value> -> string_literal | Identifier | Number | <E>

8. Functions

<FunctionList> -> <function> <FunctionList> | ϵ

<function> -> <DType> Identifier (<func_Parameter>) { <code_block> }

<mainFunc> -> khali_kaam_kar shuru_hoja () { <code_block> }

<func_Parameter> -> <DType> Identifier <ParamRest> | ϵ

<ParamRest> -> , <DType> Identifier <ParamRest> | ϵ

<ReturnStatement> -> nikal_lo <E> ; | nikal_lo ;

9. Comments

<Comment> -> <SingleLine> | <MultiLine>

<SingleLine> -> // {Any character} \n

<MultiLine> -> /* {Any character} */

10. Code Block and Statements

<code_block> -> <Statement> <code_block> | ϵ

<Statement> -> <Expression> | <ArrayStatement> | <condStatement>

| <LoopType> | <Input> | <Output> | <FunctionCall> ;

| <ReturnStatement> | tham_ja ; | wapas_aja ; | ;

2. First And Follow sets

Non-Terminal	Production Rules	First()	Follow()
<DType>	pura_number thora_number jumla harf	{pura_number, thora_number, jumla, harf}	{Identifier, shuru_hoja }
<RelOp>	ke_barabar_ha ke_barabar_nahi_ha se_bada_ha se_chota_ha se_bada_ya_barabar_ha se_chota_ya_barabar_ha	{ke_barabar_ha, ke_barabar_nahi_ha, se_bada_ha, se_chota_ha, se_bada_ya_barabar_ha, se_chota_ya_barabar_ha}	{Identifier, Number, ++, --, { }

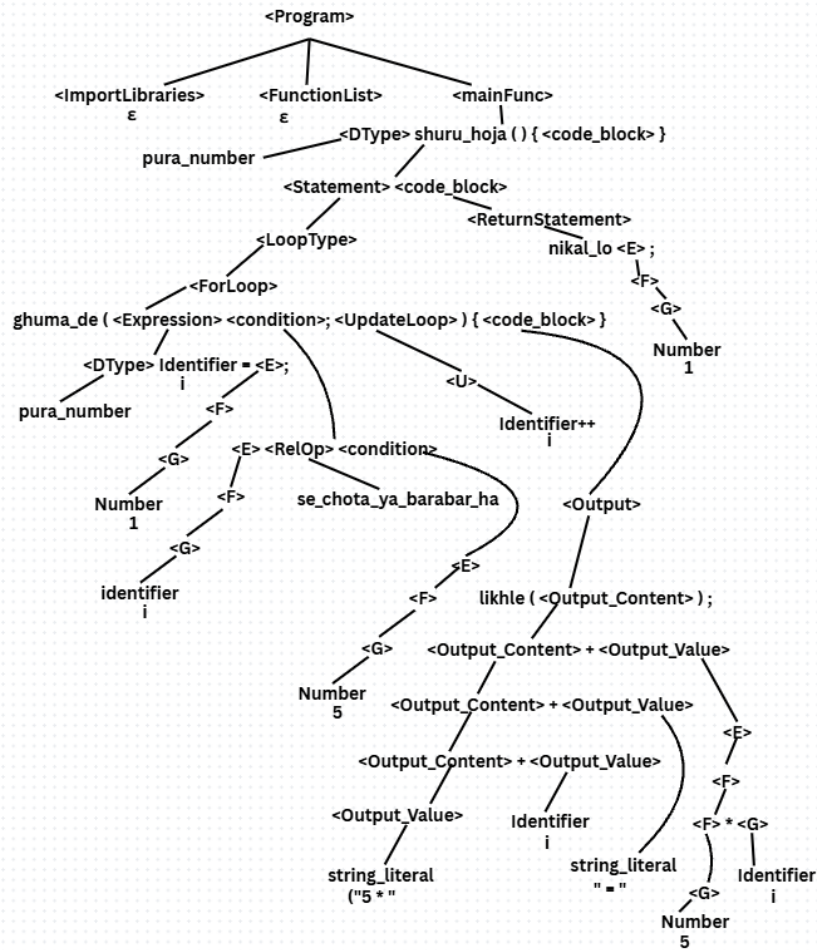

3. Program:

```

pura_number shuru_hoja() {
    ghuma_de (pura_number i = 1; i se_chota_ya_barabar_ha 10; i++) {
        likhle("5 * " + i + " = " + 5*i);
    }
    nikal_lo 0;
}

```

4. Parse Tree of Program:

.....
